2 Transiciones

# Dos articulaciones de la modernización

Endógena el desarrollo mata a la autocracia

Exógena el desarrollo impide que resucite la autocracia  
(dado que algo indeterminado la mató)

## Predicciones

Miremos **transiciones**:

vEndógena unidireccionales

vExógena hay dems más robustas que otras (las modernas)

## Seguimiento longitudinal discreto (*xsts*)

- Cuántos periodos perdura el país en un mismo estado
- Qué factores inciden en la transición

## Predicciones

<sup>a</sup>Since per capita income is lagged, we lose 135 observations, for the total of 3,991. The following abbreviations are used:

PJK is the probability that either regime dies during a particular year

TTR is the number of transitions

TOT is the total number of regime years at a particular level

PAD is the probability of transition to democracy

TRD is their number

TA is the total number of years under authoritarianism

PDA is the probability of transition to authoritarianism

TRA is their number

TD is the total number of years under democracy
